Text tools are moving to the GPU, and the Canvas in Photoshop will create a virtual content, including layers, allowing for multiple views of content merged together. It will also allow for creating multiple versions of the frame, so you can make changes before/after. And it'll be easy to switch between layers in your native document. **Make Global** global smart objects are now possible, which means the user can apply changes or accidentally make changes in your photo, providing a quick and easy way to produce changes that can't be fixed without re-editing.
