Keyboard Macro Recorder is a utility for recording macros or hotkeys, which can be easily triggered by pressing a key combination. The recording feature is a typical feature in any keyboard-based software application, and the developer thought about this. For example, with this program you can record yourself speaking a string of words (hotkey), or typing a long text (macro). With this tool, you can create your own sets of hotkeys or macros for faster and easier operation. Moreover, the application sports a user-friendly graphical interface that makes the setup process a breeze. Furthermore, KeyMacro enables you to record the activity you are currently performing, and also the content on your clipboard. In addition to the recording function, this software allows you to create a detailed description of the recording, view the contents of the clipboard, change settings, such as the recording rate, and easily delete the recorded macros. More sophisticated users can launch a terminal from the tray icon and record commands in an already-defined area. The text displayed on your screen will also be recorded when the program launches a terminal. Moreover, if the recording is interrupted for any reason, the application will automatically save the recording in a

separate file, so you can easily resume where you left off. The usage is pretty simple. All you need to do is to press the Start or record button in the application's main window. Then, you will be asked to select the recorded macro from the list and assign a shortcut. That's it! With KeyMacro, you can record your input into the clipboard, launch a shell and record commands from the terminal, and even use the GUI interface to record or launch commands. The program is able to play back the recorded macros. However, you will need to launch the KeyMacro application twice in order to start and stop the playback. In addition, the recorded text is not saved as a regular recording, but as a file with the.rec extension. This is especially useful when you have recorded a series of macros and you want to resume the activity from where you left off. KEYMACRO was developed for Windows XP.

TEST DATA SETUP To use the Macros test data, you need to run it on the same Windows OS where the program is installed. Recorded macros can be played back in any other Windows OS (in most cases).
