The new tools that were mentioned at the Adobe Max conference, and still being worked on, are Being suggested, which engineers use to suggest features to developers. The idea, as explained in the press release, is to let the software suggest the kinds of tools that it thinks customers would like to see, based on their workflows. So, it's looking for ways to show you even more of the features it has, now and in the future. We're sure the developers of the system, which are targeted by Adobe's Maxwell and Bron Radishak, 22, will be able to generate some solid ideas. One of the things that Nvidia devotes a section in its GeForce driver changelog to is the new ray-tracing support. It emphasizes how if you're using it with Photoshop on Windows, the way to get it is to turn it on from Control Panel. To turn on the ray-tracing feature in Photoshop, visit Edit ▸ Preferences ▸ Rendering, and drag a slider to the left. As of this writing, Ray tracing is available in Photoshop CS5, is disabled by default, and is apparently at the default setting. To enable it, head over to the Control Panel ▸ Performance ▸ Effects ▸ Ray Tracing. This is also where you'll find an option to turn it off. Not a feature that you'll use all the time, it's good for those times when you want to render a complex brush stroke out in stunning detail. Where and how you'll use it is, of course, another issue. The basic idea in the press release is to allow for more natural light in an image. This is due in part to the introduction of its new feature, Photomatix, that uses Dynamic Light to automatically balance the light on an image. Of course, you can use your own settings, but the new feature also lets you pick a look from Photo Matix' gallery, and then adjusts the settings to meet the user's needs.

Adobe Photoshop Elements is a powerful, full-featured desktop photo editor that seamlessly and automatically combines high-quality photo editing tools with professional layout and graphic design functions, allowing you to create print or on-line publications, personal and business cards, posters, calendars, and more. We've selected some of the most exciting 18 new features that are coming soon to Photoshop CC. These features will help you be more productive with Photoshop, from faster selections to the return of the Pencil tool and a much-requested evolution of the Shape Anchor tool. Below you'll find a complete list of the new features that you can expect in upcoming updates in February 2020. Adobe is starting with some exciting announcements for the upcoming updates. The first of these updates will include the return of the Swatch Panel tool. The last time you used this tool was in Photoshop CC 2018. The Swatch Panel enabled an easy way to adjust a layer or an image's colors. It also allowed you to toggle between preset trims for layers and was used to adjust hue, saturation, and lightness. In 2020, you'll be able to use this tool again, and the panel will also offer an option to quickly toggle through filters to see all their possible transitions. Also on the horizon is the return of the Pencil tool. Photoshop CC 2018 was the last version that had this tool. In 2020, you can use the Pencil tool to zoom into an image or draw on it. This tool will be essential for quickly designing effects or line art.
