The software has started to mature into a powerhouse of a tool and these past years have brought about a serious upgrade in user experience. Although I prefer versions that are built around a specific OS for the sake of simplicity and simplicity, Lightroom is a giant (and free) step up from Photoshop Elements. The native support for RAW format is one of the more popular functions, while the integration of desktop and mobile apps has the potential to replace tons of other programs that do the exact same thing. And what a legacy it would be for Photoshop if it did. So kudos go to Adobe for doing something that many have not been able to quite accomplish. It's a great step forward for the future of online creation. However, it does open up Photoshop to much competition. With other apps such as Premier Pro and others, there's much less room for growth. But one of the best features is that Lightroom actually distinguishes itself quite a bit from the rest of Adobe's products. The way it integrates with the web is perfect. There's no reason for a photographer or designer to not prefer Lightroom. The last advantage of Lightroom is the fact that it can be easily integrated with all sorts of cameras. So photographers have the power to use Lightroom on their smartphone during the shoot. It's not because Lightroom supports RAW photography though, but it is a common format that is supported by all RAW conversion programs. It's that other apps don't offer a smartphone app. You really can't go wrong with Lightroom if you want to carry a camera with you.
