This means that at its core, Photoshop is still an intimidating design tool. You can do some fantastic things, but you can also get into endless trouble. In order to make the interface easier, a function called “Live Shape Painting” has been added, and you can focus your viewing window on any layer in the document and apply a brushstroke to any area without changing any underlying settings. In the past, you needed to select Text Tools > Live Shape Painting to use it. Now you can click the little arrow in the bottom-right corner and move the live painting brush to the desired layer. If you're over the moon about this, you're going to love Sketch, which renders all the tools and brushes directly into the viewport. Adobe also added a number of different Layout tools to make the creation of layouts much easier. Photoshop once threatened to bury you in toolbars labeled Grid and Warp, which had their own functions stuck in weird little corners. It only recently brought Layout to parity with its other design tools. As soon as Lightroom 5 is released, I will be using it for all my work. I will use it for everything — teaching, experimenting, even reviewing. Even before the beta release, this was one of the best features introduced. Why not? It has always been hard for me to find good slideshows without the use of expensive software systems. I couldn't simulate the quality of effects that were included in the software my students were using. The best one I've seen so far is the new one that comes by default in Lightroom, and that's only because it's the most recent. Naturally, I'm trying to figure out everything the new software has to offer. Also, since my new presets will have to be in the software's library, I am going through presets that have been created under former versions.

Myths and legends have been passed down by word of mouth from generation to generation. Many are said to be true. Even a legend can have some truth, as in the case of entrepreneurship. Over the past 20 years, I've been witness to entrepreneurs believing in concepts that they have seen in their raw manifestations, and apply them to their businesses as if they were a given. I have been one of the adepts who believed that 3D would be a great way to show the information about the products. However, with the growing number of products using the 3D technology, it has become a waste of time and effort. That's how I came up with the idea to create an online site that could benefit people who want to know about 3D and related 3D related products. Then I created a website called **3d.ucarenya.com** because I'm a fan of the 3D caricha theme and its brands. You'll also want to check out the live view helper, which lets you preview RGB images easily within a calibrated

viewfinder, keeping your color space in mind while adjusting different aspects of your shot, such as exposure, saturation, and white balance. Equally exciting is the ability to seamlessly go between editing and reviewing your work offline, right in your web browser with ACDSee, then sync edits and locations to Photoshop directly through the software. You'll find plenty of new features for the more advanced users, including a brand-new interface, powerful selection tools, and dozens of new painting tools to help you create everything from stunning new portrait studies to amazing composition with ease.
