There's also a new "Magic Tools" feature in Lightroom. Those are the "Refine Edge" (default in the Fine settings), "Create Frosted Glass Blur", "Fade" and "Fresnel" tools. I'd hoped that these new tools be more robust than the fast-and-dirty tools that have existed in the past. Nope. The new tools seem to do the same things as the previous tools, just much more slowly. Granted, it's a beta watch, but there's room for improvement. I ran into a bit of a snag when installing the Lightroom 5 final version. I kept getting a popup window with "Error Failed to Download". The error reported that my download file had too many components, and one component was too large. I wasted a little time trying to split the download by opening unzipped sections, but I ultimately decided to close that error window. In the end, Lightroom decided that it had finished its installation, and I was able to open the program. I honestly love that I can lock Lightroom 5's updates on my computer. That's just a nice thing to know. Lightroom 5 continues to be a member of Adobe's Creative Cloud and is now \$10 cheaper than it is in their Creative Cloud Photography package. With this price drop, you'll need to decide how quickly you need to use Lightroom, and whether you want or need access to Photoshop. Personally, I have a license for CC Photography, but not necessarily for Photoshop. I'll use Lightroom. I have always found Lightroom to be a clean platform with a tremendous feature set, and it's always been fairly reliable. In fact, the only time I've had reliability issues with Lightroom have been when I decided to mess with my catalogs.

You can also buy a license for a single user and use just that one version of Photoshop. For example, you could get a single license license for Creative Cloud memberships and use it on whatever device you have an account on (desktop, laptop, tablet, phone, or other device). After you get the device you want to use the software on or from your computer, you can keep using it on that device so long as it's not deactivated. It's a smart way to keep track of your software usage and save a lot of money when you're not using Photoshop on that device. First, make sure you're buying a valid license. With a valid license, you can use the software as much as you'd like on as many devices, so long as you're on the same Adobe ID and that device is active. You're allowed to install the software on one computer and use it until it expires. After that, you'll have to install a new version or buy a new license if you want to keep using it, so it's important to buy a new license after you've already paid for it. Next, make sure you're buying the right version for your needs. Don't get stuck with a version that you can't use or don't want to use. For example, you might want to use Photoshop Lightroom for home or business projects, but not Photoshop for your photo editing needs. Likewise, if you work with video editing in Premiere Pro, don't buy the smaller version of Photoshop. Answering this question ahead of time will save you a ton of headaches later. You'll want a version of Photoshop that's appropriate for the work you want to do with it. e3d0a04c9c
