Adobe's Copy Effects feature collects multiple copies of the same object on the canvas and opens them in a single window, making it easy to blend them with each other and manipulate on the canvas. The new Copy Effects Layout tool also keeps all the previous Copy Effects in the layout you defined previously. Other exciting updates include the new Match Gradient tool, which lets you automatically match the colors of a background and fill in a collage. The Match Lighting tool also lets you adjust the intensity of a light source, and it allows you to set the intensity down to 0%, which means you can create extremely dark or light images with the same settings. An instant mask method is also present in the software. User can simply select a region of interest or line in the image, and the rest of the photo is masked. Eventually, they can create their own set of masks. Moreover, without even creating a new image, users can manipulate and edit any selected region, which also saves time. Stuff is pretty future-proof too. With it you can make layered Photoshop files, which is a type of photo manipulation and previewing software. Photoshop layers let you apply different edits to parts of an image before it's saved, without affecting those parts of the image during the editing process.
