PS2 Ponkotsu Roman Daikatsugeki Bumpy Trot SLPS 25457 NTSC Jrar - Details about Ponkotsu Roman .Q: Is there a way to combine data from multiple tables using the same primary key? I have two tables in my database, which are defined like this: public class User { public int ID { get; set; } public int Level { get; set; } public string Name { get; set; } public string Email { get; set; } } public class SmartHome { public int ID { get; set; } public string Name { get; set; } } ID is the same for both tables. Level is in a relation with the primary key of the table it belongs to. I'm trying to load all the users that have either level 1 or level 2. Normally, this can be done like this: var data = from user in db.Users from h in db.SmartHome where user.Level == h.Level select new User { ID = user.ID, Level = user.Level, Name = user.Name };
