I do not agree with this statement, and in fact, I would consider Photoshop a craft. It is a tool that helps me create a particular effect. There are in-depth tutorials available on the Adobe website - but I like to use the Guides feature to create the fixed visual boundaries in my artwork and then bloat them up with color to achieve the opacity to match my subject. The History palette is essential for saving time because it lets you quickly undo previous steps in your work for fast retouching. Another great thing about the History palette is that it allows you to revisit your edits even after you've closed the toolbox. In a pinch, you can use the History palette to pick up where you stopped. All of the previous steps in your edit take place in the History panel so ink or other elements you used prior to starting the current step reside in the History panel until you decide to permanently save those values. The Layers palette groups Photoshop files into *layers*. Layers keep elements of your image separate- which means that you can erase, blend, duplicate, copy, and move them freely- and then add them back into your image if you decide later that you want them back. Plus, a layer can contain multiple elements, such as different color swatch, shades of the same swatch, or patterns. The Adjustment Layers palette lets you modify elements on your image based on certain values- such as the lighting, contrast, or colors. The most common is the Levels palette, which allows you to adjust the contrast on individual channels to make color. Using the Grain popup, you can add a speckle-like effect to the image. The tire tracks feature in Photoshop 5 and above lets you add the spatter of a car tire mark to your image. You can also use this tool to add a blurred background. e3d0a04c9c
